

WEB CONFERENCING ENHANCEMENTS

Isoph is proud to announce major enhancements to its Web conferencing service, a component of the Isoph Blue learning management system. Isoph Blue integrates multiple learning formats and features (authoring and assessment tools, instructor-led learning, self-paced learning, synchronous learning, community features, etc.) within the same application, with a consistent user experience. The Isoph Blue Web conferencing service allows clients to engage participants in live online seminars, presentations, and collaborative work sessions. Conference hosts can show PowerPoint slides, share applications, conduct Web tours, and use the whiteboard for interactive exercises. The service also includes voice-over-IP and Web cam image transmittal.

Major Enhancements and New Features

Major enhancements in the new version include:

- **Improved User Interface:** The user interface has been streamlined, providing improved usability and increased viewing space for slides and application sharing.
- **Easier Connections:** Enhanced connectivity and elimination of the bandwidth test make it easier for users to join meetings in a secure environment.
- **Faster Image Transmission:** Load and share PowerPoint slides, pictures, and screencasting more quickly.
- **Auto-scaling:** The new auto-scaling feature assures that participants see the same positioning of items on their screen as on the presenter's screen, even at different screen resolutions.
- **Enhanced Polling Features:** Hosts can launch a private poll and save the results to review who voted and for what.
- **E-mail Invitations:** Hosts can automatically send e-mail invitations to users to notify them of a Web conference in progress. The invitee receives an e-mail with the name of the meeting, password, duration, and a direct link to the user information page.
- **File Transmittal:** Hosts and co-hosts can send files to a user, multiple users, or everyone in the conference room.
- **Web Cam Options:** Hosts now have the option of using a picture in place of a Web cam image. Low-bandwidth users can choose to not receive Web cam images.

About Isoph

Isoph offers flexible learning management system software, along with instructional design and course development services to help our clients develop successful, sustainable learning programs. For more information, please call 866.969.9260, or visit www.isoph.com for product and company details.
